Professional Summary

Innovative and results-driven Software & Release Engineer with extensive experience in developing and automating CI/CD pipelines, performing protocol conformance testing, and managing cloud-native deployments. Adept at improving operational efficiency and ensuring high-quality software delivery through automation and collaboration. Passionate about leveraging technology to solve complex problems and drive continuous improvement.

Professional Experience

LendingClub - Hybrid

Release Engineer

December 2021 – January 2024

- **Optimized CI/CD pipelines:** Designed and implemented robust pipelines that reduced deployment times by 30% and improved development efficiency.
 - **Integrated external services:** Seamlessly incorporated third-party tools into workflows, streamlining processes and enhancing team productivity.
 - **Enhanced release automation:** Collaborated with cross-functional teams to automate release processes, resulting in more reliable and continuous deployments.
 - **Adopted test automation:** Spearheaded the integration of Mabl tests, significantly increasing deployment consistency and traceability.
 - **Improved platform reliability:** Upgraded the GitHub Platform's performance and feature set to meet internal customer requirements.
 - **Developed monitoring solutions:** Introduced automation for monitoring and incident response, which improved service resilience and reduced resolution times.
 - **Conducted in-depth analyses:** Identified and resolved pipeline issues, ensuring uninterrupted development flow.
 - **Implemented end-to-end testing strategies:** Worked with teams to improve testing methodologies, leading to higher quality software releases.
-

Tech Mahindra - On-Site

Software & Device Engineer

September 2021 – December 2021

- **Executed Comprehensive Protocol Conformance Testing:** Led rigorous LTE/5G Device Lab Protocol and RF RRM conformance tests on industry-standard devices. Utilized advanced test equipment such as the **Keysight E7515B Communication Test Set** and the **Anritsu MD8430A LTE/5G Conformance Test System** to verify device compliance with international standards.
 - **Engineered Automated Test Setups:** Configured and automated commercial protocol test simulators, including the **Rohde & Schwarz CMW500** and **Keysight Nemo Indoor** systems. This automation reduced manual setup time by 25%, streamlining the overall testing process.
 - **Optimized Debugging & Device Performance:** Employed advanced real-time operating system debugging tools and hardware debuggers (e.g., **Lauterbach Trace32**) on devices built on Qualcomm Snapdragon platforms. This enabled rapid identification and resolution of performance bottlenecks, significantly enhancing device stability.
 - **Championed Cross-Functional Knowledge Sharing:** Provided technical support to global teams and led monthly training sessions on effective branching strategies using tools such as Git and JIRA, thereby improving collaboration and code quality across projects.
-

Catalina USA - Remote

Software Engineer Intern

June 2020 – September 2020

- **Automated testing processes:** Collaborated on integration, acceptance, and regression tests using Selenium WebDriver and JUnit.
 - **Streamlined CI/CD:** Initiated and troubleshoot Continuous Delivery builds in Jenkins, integrating with JIRA to resolve issues promptly.
 - **Monitored and improved code quality:** Ensured adherence to design standards and optimized JIRA integration with version control and build automation tools.
 - **Implemented Infrastructure as Code:** Deployed Docker and Jenkins solutions to support continuous integration and deployment.
 - **Provided developer support:** Assisted with version control queries and facilitated smoother CI/CD processes.
-

Education

Humboldt State University, Arcata, CA

Bachelor of Science in Computer Science, *May 2021*

Lycée Français La Pérouse, San Francisco, CA

Diplôme D'études Secondaires

Technical Skills

- **CI/CD & DevOps:**
 - CI/CD Pipeline Automation (Jenkins, GitHub Actions, GitLab CI/CD)
 - Release Engineering & GitOps
 - Cloud Environments: AWS, Kubernetes, Cloud Native Infrastructure
 - **Programming & Development:**
 - Python, Java, JavaScript, C++, Selenium, JUnit, Pytest, Mabl, Maven, Gradle
 - **Version Control & Infrastructure:**
 - Git (GitHub, GitLab)
 - Infrastructure as Code: Docker, Terraform
 - Database Management: SQL, Database Modeling & Design
-

Additional Strengths

- Strong problem-solving and analytical abilities.
- Excellent communication and cross-functional collaboration skills.
- Experience working with distributed teams across multiple time zones.
